SSP
Safety System Products

Safety solutions from a single source

Years of experience, innovative products, concentrated know-how
in the area of machine safety

THOUGHT AHEAD

INNOVATION

OFF-THE-SHELF SOLUTIONS

The technical and normative requirements for safety technology in robotics and automation are becoming increasingly complex. Consequently, implementation of safety solutions is often unnecessarily complicated. At SSP we think differently: We want to make the safety technology applications again as simple as possible and have committed ourselves to the 'We Simplify Safety' mission. However, with this commission just to modify or improve existing products is not enough: We wanted to reinvent the 'safety wheel', so to speak. In the form of a comprehensive, coordinated product range, which offers everything from a single source: from safety fences and sensors to control technology and safety services.

In order to achieve this aim, a dynamic team of engineers and technicians works daily on developing products and solutions. With our partners Fortress Interlocks and ReeR we complete our product range with two outstanding specialists from the respective disciplines. Competent service and distribution partners are available worldwide.

we simplify safety

ZEUS

Enabling - ergonomic and safe

If it is necessary to provide the operator a special operating mode for work such as commissioning, maintenance, repair or process set-up, important legal requirements must be observed.

The enabling mode has proven effective. In this operating mode, the machine operator has the option to bypass certain safety devices, like safety doors, by selecting the operating mode and actuating the enabling unit.

The important point here is the three-level function. The enabling unit allows certain hazardous movements only in the middle position and with additional precautions. If the operator releases the unit or pushes it into the Level 3, the system switches off for safety.

ZEUS guarantees a fatigue-free work thanks to its ergonomic design and low weight. It is suitable for left-handed or right-handed operators and easy to operate even when wearing gloves.

we simplify safety

Technical Information

Important features

- Ergonomic design
- Dimensions 186 × 70 mm
(without mounting bracket and emergency stop switch)
- Robust housing in IP65 and IP67
- Modular design
- Standard delivery of 10 m connection cable
(stop switch configurations with M12 8-pole plug)
- Individual connection via terminal block

Additional functions

- Operation of up to 120 axes/functions
- Extended LED diagnosis
- Increased protection against manipulation
in-hand sensor (hand detection)
- "Operation monitoring" with activity sensor
- Rocker/function button
- Large selection of plug connectors

Information

Please observe following requirements during configuration of your enabling switch:
The emergency stop switch cannot be configured with a plug connector acc. to EN ISO 13850.

Model code

ZEUS 11-15 15 31

Emergency stop/stop switch

0 no emergency stop switch
1 with emergency stop switch
2 with stop switch

Connection

1 internal wiring

Diagnosis

0 no LED
1 red/green LED
2 green/green LED (on request)
3 red/red LED (on request)

Control keys

0 no Button
1 button front
2 button top
3 button front and top
4 rocker button
5 button front and rocker button

Individual selection, control and detection

Maximum operating comfort and reliable protection against manipulation

Control functions

Support bracket & spiral cable

Hand detection with in-hand sensor

With the operating terminal ZEUS enabling/operational unit, up to 120 functions can be triggered in the binary-coded, such as axes, valves or grippers. The seven-segment display integrated in the interface indicates the selected function and makes the operation easier for you. The extended LED diagnosis provides you a helpful feedback.

The in-hand sensor provides protection against manipulation; it detects the operators hand and reliably protects against bypass or other manipulations. The ZEUS enabling/operational unit detects via activity sensor when it is removed from the support bracket. Only then it is switched into the special operating mode. This makes sure that no unwanted operation errors occur.

The ZEUS enabling/operational unit can be integrated easily into your system thanks to the universal connection via a plug, cable or terminal.
